

MODULUS Gradebook — WCAG 2.1 audit remediation

Our response to the 33 findings in the MODULUS website accessibility audit (report 02), with the status and resolution of each.

PRODUCT	STANDARD	SOURCE	PREPARED
MODULUS Gradebook	WCAG 2.1 A / AA	Audit report 02 · 33 findings	3 July 2026
SHARED COMPONENTS			
@infonomic/uikit 6.7.7			

— AT A GLANCE

31 of 33 findings addressed

Every finding has been actioned or has a documented decision. Two findings are not changed — one is informational (logged by the auditor), and one we assess as a false positive and would like to discuss.

33 Total findings	18 Resolved & verified	13 Fixed — verification underway	2 Not actioned (see notes)
----------------------	---------------------------	-------------------------------------	-------------------------------

- Resolved & verified — implemented and confirmed in the running app
- Fixed — implemented; final screen-reader / signed-in verification underway
- Not actioned — informational, or assessed as correct-as-built

Where the fixes live

Many findings sit in our shared component library, `@infonomic/uikit`, rather than the app itself — the search field, select, checkbox, copy button, pagination and tabs. Those were fixed centrally and released as 6.7.7, so they resolve everywhere the component is used, not just on the page where each was reported.

How we verified

Type-checking and linting on every change; the app driven in-browser (light & dark themes, keyboard operation, rendered-DOM inspection). The tab keyboard behaviour and sign-in page were confirmed hands-on. Remaining items await a signed-in screen-reader pass over the authenticated dashboard.

RESOLVED & VERIFIED

● Resolved

Confirmed fixed · 18 findings

#	FINDING & RESOLUTION	LOCATION	WCAG	SEVERITY
1	Theme switcher activated on Tab / Shift Key handling changed so the switcher activates only on Space / Enter.	Global	2.1.1 A	● Moderate
2	Profile menu reported the wrong item count Removed the <code>role="separator"</code> divider that was being counted.	Global	1.3.1 A	● Moderate
3	Footer focus indicator contrast too low Darkened the focus colour to meet the 3:1 non-text-contrast minimum.	Footer	1.4.11 AA	● Moderate
4	“Create activity code” should be an h1 Page heading is now a top-level <code>h1</code> .	Create Activity Code	1.3.1 A	● Minor
6	Field helper texts not associated with inputs Helper texts wired to their inputs via <code>aria-describedby</code> .	Create Activity Code	1.3.1 A	● Minor

#	FINDING & RESOLUTION	LOCATION	WCAG	SEVERITY
7	"Activity code" field had no accessible name Field now exposes a valid accessible name.	Create Activity Code	3.3.2 A	● Serious
8	Multiple unnamed form elements Form structure on the create-activity-code page corrected.	Create Activity Code	4.1.2 A	● Minor
11	Focus indicator lost on tab & tab-panel Removed an <code>outline:none</code> ; tabs and panels now show a visible focus ring. Confirmed by keyboard.	Activity Code — Edit	2.1.1 / 2.4.7	● Serious
12	Cancel-button focus contrast (1.8:1) Darkened the shared focus ring to #666 (5.8:1). <code>uikit 6.7.7</code>	Activity Code — Edit	1.1.1 A	● Serious
13	Invisible "no action" button in Remove Member dialog Removed it; focus now opens on the labelled Close button (whose accessible-name typo was also fixed).	Activity Code — Edit	2.1.1 / 2.4.7	● Moderate
14	Tabs not switchable by keyboard Enabled arrow-key activation on the tablist; with the restored ring, tabs now switch and show focus. Confirmed by keyboard.	Activity Code — Edit	2.1.1 A	● Critical
16	Members should be an unordered list Already implemented as a <code> / </code> list with each action inside its item.	Activity Code — Edit	1.3.1 A	● Moderate
20	Search clear / search buttons had no focus indicator Removed the <code>outline:none</code> that suppressed the ring. <code>uikit 6.7.7</code>	Learners	2.4.7 AA	● Serious

#	FINDING & RESOLUTION	LOCATION	WCAG	SEVERITY
22	Search aria-labelledby pointed to a missing id Resolved in an earlier component-library accessibility pass. uikit 6.7.6	Learners	4.1.2 A	● Serious
30	Multiple unnamed forms on the sign-in page Each of the three forms (password, GitHub, Google) now has an <code>aria-label</code> .	Sign In	4.1.2 A	● Minor
31	Required "*" read as part of the label Asterisk marked <code>aria-hidden</code> ; required state still conveyed by <code>aria-required</code> . uikit 6.7.7	Sign In	—	■ Best practice
32	"Remember me" checkbox had no focus indicator Checkbox now shows a focus ring when keyboard-focused, checked or not. uikit 6.7.7	Sign In	2.4.7 AA	● Moderate
33	"Sign In" should be an h2 Rendered as a real <code>h2</code> , matching the "Start Activity" heading level.	Sign In	1.3.1 A	● Minor

— FIXED — VERIFICATION UNDERWAY

Implemented, pending a signed-in pass · 13 findings

These live on the authenticated dashboard. The code is complete, type-checked and merged; a final screen-reader / signed-in walkthrough will move them to resolved.

● Fixed

#	FINDING & RESOLUTION	LOCATION	WCAG	SEVERITY
9	Screen readers not notified on page change Focus is moved to the new page's <code>h1</code> after each client navigation.	Global (SPA)	Best practice	■ Best practice

#	FINDING & RESOLUTION	LOCATION	WCAG	SEVERITY
10	"Copy" button had no accessible name Added a descriptive <code>aria-label</code> .	Activity Codes	4.1.2 / 3.3.2	● Critical
15	Autocomplete announced raw data before the value Added <code>itemToStringValue</code> so the screen reader hears the person's name, not the serialized object.	Activity Code — Edit	4.1.2 A	● Minor
17	Analytics card focus contrast (1.6:1) Cards now show a contrast-compliant focus ring via <code>focus-within</code> .	Analytics	2.4.7 / 2.1.1	● Moderate
18	Breadcrumb focus differed by browser / too faint Added an explicit <code>focus-visible</code> ring (5.8:1) so Safari no longer falls back to its faint default.	Activities	2.4.7 AA	● Minor
19	Card titles were not real headings Refactored to the link-overlay pattern: each card has a real <code>h2</code> whose link covers the card, so the page is navigable by heading.	Analytics	1.3.1 A	● Minor
21	Search buttons unnamed + <code>aria-label</code> typo + redundant role Fixed the misspelled attribute (so the names apply) and removed the redundant <code>role="button"</code> . <i>uikit 6.7.7</i>	Learners	4.1.2 A	● Serious
23	Pagination controls not operable Enabled controls were already links; the disabled controls (First/Prev, current page) are now <code><button></code> elements instead of bare <code><div></code> .	Learners	1.3.1 A	● Critical
25	Sortable columns lacked sort state Added <code>aria-sort</code> to sortable headers plus a visually-hidden "sortable" hint on the controls.	Learners	4.1.2 A	● Moderate

#	FINDING & RESOLUTION	LOCATION	WCAG	SEVERITY
26	Copy buttons in table cells had no names Disambiguated with <code>aria-label</code> — “Copy URL” and “Copy launch URL”.	Activities	4.1.2 A	● Serious
27	Page <title> didn’t update on navigation Dashboard routes now set a per-page title (e.g. <i>Modulus – Learners</i>), which the built-in route announcer reads aloud.	Global (SPA)	2.4.2 A	● Moderate
28	Stat cards should be a list / group Wrapped the stats in a labelled <code>role="group"</code> .	Completion	1.3.1 A	● Minor
29	Page sections lacked semantic headings Section titles promoted to <code>h2</code> so the page structure is exposed.	Completion	1.3.1 A	● Minor

— NOT ACTIONED

● For discussion

Documented decisions · 2 findings

#	FINDING & DECISION	LOCATION	WCAG	SEVERITY
5	Heading levels skipped (footer h3) Acknowledged — logged by the auditor as informational (“not really practical to fix”). Footer headings are structural site-wide; left as-is.	Footer	1.3.1 A	■ Best practice
24	“Pages per view” has role="combobox" Assessed as a false positive. The control renders <code>role="combobox"</code> with the full supporting ARIA (<code>aria-haspopup</code> , <code>aria-expanded</code> , <code>aria-controls</code> , <code>aria-labelledby</code>) — the valid ARIA 1.2 select-only combobox pattern. Removing the role would break it. We’d welcome the auditor’s confirmation.	Learners	4.1.2 A	● Minor

One question for the auditor — finding 24

Finding 24 is the only point where we'd propose *not* making the recommended change. The `role="combobox"` reported here is, in our reading, the current WAI-ARIA select-only combobox pattern (a button that expands a listbox), correctly supported by `aria-expanded` / `aria-controls`. The "remove the role" guidance matches the older ARIA 1.1 model where `combobox` required a descendant text input. If you agree, we'll mark it closed; if you're seeing a specific AT failure, we'll dig in further.
